

Compressor Selection

A question which is often asked by customers is why they should buy a Jordair/Bauer system rather than another. This is a very important question and can be explained by a number of important points.

While not always a consideration at purchase; Jordair/Bauer systems have a significantly higher resale value than any other brand in Canada. Jordair systems are easy to resell and used units are in demand due to the well-known Jordair/Bauer reliability and quality.

Jordair is both an ISO 9001:2015 accredited company and also CSA certified, all pressure components are CRN registered in all provinces and territories in Canada.

No one matches the Jordair warranty, a 2-year full system warranty and a 10-year block warranty program.

CRN certified ASME and B51 fully compliant filter systems designed for 6500 PSIG working pressure. Design rated for 25 years of pressure service life. The compressor filter systems are supplied with the final oil/water separator cycle counters for added safety.

Jordair and Bauer have a joint venture agreement for Canada providing spare parts with a large stock in Delta BC. This is supported by rapid parts supply from Bauer in Norfolk USA. Jordair systems have far lower down times when repairs are required than other brands due to inherent reliability and rapid delivery of spare parts.

Bauer cartridges are of the highest quality standard and typically have a 30% or higher lifespan capacity than competitive and knock off type cartridges.

Jordair/Bauer stands for unsurpassed quality and safety backed by 70 years of Bauer experience and 45 years of Jordair experience in compressor technology. Why settle for anything less?
